French Vanilla™

Finally. A word processing and file management system with options usually found only in expensive software. Family Computing *says about TRI MICRO SOFTWARE, "The beauty is that at any time you can go from one program to another without information loss." No fussing with loading various disks. No time lost in creating data transfer files.*

Word Processing

Use this program to prepare professional looking documents, utilizing an 80-column scrolling screen format. Create boilerplates using the unique "scratchpad" feature and the merge capability. You can use shadow or bold printing, underlining and centering, superscripts and subscripts --- any features which your printer supports. And the Search and Replace function makes editing almost enjoyable.

File Management

Allows you to store and organize mailing lists, research and homework notes, personal records and more. The free-form "mail-merge" feature makes printing labels or forms a simple task. You can select a set of files, delete repeated records, sort by zip code or sort up to three fields at a time. This means that managing mailing lists or any other information which needs taming, is just a few keystrokes away.

Spell-Checker

The easy to use 30,000 word spelling checker eliminates frequent spelling errors. Misspelled words are highlighted and you are allowed to correct the word, leave it unchanged or add it to your dictionary. You can even adapt the dictionary to your personal vocabulary and jargon.

Get aquainted with the whole line of French Vanilla** software soon. It's all affordable, high quality, copyrighted software, complete with documentation. It's something you just can't afford to pass up.
